

THE PROBLEM FINDER

Let AI find the problem you are unfairly built to solve.

Answer 10 honest questions. The AI does deep research and hands you the top 3 opportunities where demand is high, supply is low, and your background gives you an edge.

Which AI should you use?

Use **Manus**. It is built to run long research jobs on its own, and it browses Reddit, forums, and news for you. It has a free tier.

If Manus runs out of credits, use **Claude** with web search switched on. The prompt below works the same in both.

How to use it

DO THIS

1. Open Manus (or Claude with web search on).
2. Copy the entire prompt below.
3. Paste it in. Fill in your 10 answers where you see the blue brackets. Be honest. Do not skip.
4. Let it work. It will research, verify, and hand you your top 3 opportunities.
5. Pick 2 to 3 that excite you. Post them in the community for feedback.

The whole point: it will not guess. It has to prove every problem is real with live sources before it recommends anything. That is what makes it different from asking an AI "what business should I start."

== THE PROBLEM FINDER PROMPT ==

I am a student of a business coach looking for AI niche opportunities tailored to my specific skills, experience, and constraints. Help me find the best AI service or AI SaaS opportunity based on my unique background.

RULE ZERO: LIVE RESEARCH ONLY

Before anything else, state today's date.

You may ONLY use evidence you find through live web research in THIS session. Your training data is NOT evidence. It is outdated and unverified.

Every factual claim must include a working URL and the date it was published. Prioritize sources from the last 6 months. Never cite anything older than 12 months as proof of current demand. If you cannot find a live source for a claim, label it UNVERIFIED and it cannot support any recommendation.

METHODOLOGY (all 5 steps, in order, no skipping)

1. RESEARCH. Search Reddit, X, YouTube comments, niche forums, and industry news for real problems related to my background (my answers below).
 2. VERIFY DEMAND. Find real people complaining about the problem right now. Minimum 3 independent sources per problem. Quote them with links and dates.
 3. VERIFY SUPPLY. Search for existing solutions and competitors. Show me the exact search queries you ran and what came up.
 4. CHECK COMPETITION. If someone already solves this decently, or a funded company owns it, say so and drop it, unless my background gives a provable unfair advantage. Then explain the advantage.
 5. SCORE THE GAP. The demand to supply ratio must be extreme (8+/10). Justify the score with the evidence from steps 2 and 3.
- Only after all 5 steps may you recommend anything.

MY 10 ANSWERS

- [Q1 What I spend most of my free time on:] ____
- [Q2 Jobs I have worked and what I ACTUALLY did in them:] ____
- [Q3 Hobbies or interests I am obsessed with:] ____
- [Q4 Things friends or family repeatedly ask my help with:] ____
- [Q5 Capital I have available to invest:] ____
- [Q6 Income timeline: now / 2 to 3 months / 3 to 6+ months:] ____
- [Q7 My city and country:] ____
- [Q8 People I know in specific industries:] ____
- [Q9 Willing to work 60 to 80 hrs a week for 3 to 6 months, no guarantee? (yes/no):] ____
- [Q10 Do I prefer building (technical) or selling (people facing) or both:] ____

OUTPUT FORMAT (exactly this, for your TOP 3)

For each opportunity:

- THE NICHE: one specific sentence. Named avatar, named industry, named place.
- THE PROBLEM: what they are bleeding money or time on, in their own words.
- THE EVIDENCE: 3+ verbatim complaint quotes, each with a URL and a date.
- THE SUPPLY CHECK: searches you ran, competitors found, why the gap exists.
- WHY ME: ties directly to my Q1 to Q10 answers. My unfair advantage.
- SERVICE OR SAAS: which one and why, given my Q5 and Q6 answers.
- PRICING AND MARGIN: what I would charge, based on value created, with reasoning.
- FIRST CUSTOMER PATH: where the first 3 customers come from, given Q7 and Q8.
- GAP SCORE: X/10 with a one line justification.
- CONFIDENCE: X/10, and what would raise it.

BANNED OUTPUTS

- Any claim without a URL and a date.
- Recommendations from memory instead of live research.
- Generic advice ("lead gen for any business", "AI tools for various industries").
- Unnamed avatars ("small businesses", "companies").
- Hedged nothing answers ("this could potentially work").
- Hiding competition. If it exists, name it.
- More than 3 recommendations. Depth beats breadth.

If my answers are too vague to personalize properly, ask me follow up questions FIRST. Do not guess.
